

Mark Rodriguez, Luiza Santiago, Harshala Sawant, Michael Shane, Justin Supe

1. What is the final title of your project?

MUC @ NJIT

(MUC : Making Unique Connections)

2. What is the problem statement of your project?

There is a need for this genre of app because it would allow people to connect and build friendships in new places. It may help immigrants, as well as locals, to make genuine bonds that may ease the process of assimilation into their new environment. It can go further beyond just friendships and can be used for professional networking, too. By using responses from the users, the app will be able to connect like-minded people who can converse on the app and potentially meet up physically to further deepen their bonds. For now, the app will be specific to the NJIT community in order to help current and future freshmen better transition into college life.

3. Who are the potential stakeholders of your project?

Current and incoming freshmen are the main demographic since the app is meant to help them better transition into college. There will also be a place for upperclassmen, alumni, and even staff to be able to reach out and give advice when needed. Clubs and organizations on campus may also create their own profiles in order to get across their agenda to underclassmen who aren't well versed in college social life.

4. What is this project's scope (boundaries, what is in and out)?

- Profile Creation Element
  - Info will include : Name, Major, Year, Commute/Dorm, Interests, Photo
- Texting feature between members
- Private Story
- Forums Page
  - General text server to ask for advice, etc

- Clubs/Orgs can promote different activities
- Anonymous Q/A Page
- Calendar to display campus activities
  - Similar to CORQ
  - People can RSVP to events
